1. Download the pdf of your profile from the Linkedin then go to the google studio there upload the pdf and copy paste the entire prompt then go and grab some coffee you're resume portfolio will be ready in 10-20 minutes 😊

And for hosting you can use any provider.

Prompt

You are a senior product designer + front-end engineer. Your job is to create a **futuristic, high-converting, responsive portfolio website** from my resume document. The site must look **amazing in the first view**, feel **premium**, and use **scroll-based motion** that remains smooth on mobile.

INPUT

I will provide my resume document below.
You must capture every line from it and use it in the site content (no missing bullets).
Do not invent any achievements, companies, dates, numbers, skills, links, or titles not present in the resume.

RESUME DOCUMENT (PASTE BELOW):
[PASTE MY FULL RESUME TEXT HERE — every line]

TASK REQUIREMENTS

1) Extract & Structure (mandatory)

- Parse the resume line-by-line.
- Create a **structured JSON** object first (in your output) with:
    - basics (name, title, summary, location, email, phone, links)
    - experience[] (company, role, dates, location, bullets[])
    - achievements[] (each measurable item + context)
    - projects[] (title, stack, bullets, links)
    - skills[] (grouped)
    - education[]
    - certifications[] (if any)

    - awards[] (if any)
    - extra[] (anything that doesn't fit but must be included)
- Every line from the resume must appear somewhere in the JSON.
- If a line is ambiguous, place it in extra[] rather than guessing.

2) Build the Website (mandatory)

Create a complete working responsive website using:

- **Next.js (App Router)** + **TypeScript**
- **TailwindCSS**
- **Framer Motion** for animations
- **shadcn/ui** components (where useful)
- **lucide-react** icons

Deliver a full project structure with all key files. It must run with:

- npm install
- npm run dev

3) Visual Style (futuristic + premium)

Design language:

- Futuristic but clean: **glassmorphism + subtle glow**, grid/mesh background, tasteful gradients.
- Strong hierarchy: large hero typography, crisp spacing, premium card shadows.
- Two themes: **dark mode default**, optional light toggle.
- Maintain top-tier readability.

4) First View Must "Hook" (mandatory)

Create a **Splash / Intro screen** that lasts ~1.2–1.8s:

- A minimal animated logo/monogram from my initials
- Smooth loading bar or progress indicator
- Then transitions to the hero section with a cinematic motion

Hero section must include:

- My name + role/title from resume

- A short high-impact summary
- Primary CTA: “View Experience” (scroll to experience)
- Secondary CTA: “Download Resume” (generate a downloadable resume page or PDF-like view from the parsed content)

5) Experience & Achievements Should Look Exceptional (highest priority)

Experience section:

- Present as a futuristic timeline or stacked “story cards”.
- Each role expands/collapses with motion (accordion feel).
- Include metrics/big results as highlighted chips/badges.
- Add “impact highlights” panel that auto-pulls the most measurable bullets.

Achievements section:

- Must be visually dominant: trophy-like cards, animated counters (only if numbers exist in resume), spotlight hover.
- Group by type if possible (wins, metrics, leadership, awards).
- Add a “Top 3 Impact” strip above the fold (ONLY from resume data).

6) Scroll Motion + Microinteractions (mandatory)

Add polished motion that feels smooth (no nausea):

- Scroll reveal with staggered animations
- Section transitions with subtle parallax
- Sticky progress indicator for page sections (like a scroll spy)
- Hover interactions (tilt, glow, border gradient shift)
- Smooth anchor scroll
- Respect accessibility:
    - prefers-reduced-motion disables heavy animations

7) Responsive Behavior (mandatory)

Make it perfect across:

- Mobile (360px)
- Tablet (768px)

- Desktop (1280px+)
  Requirements:
- Mobile navigation: bottom nav or burger menu with smooth transitions
- Touch-friendly tap targets
- Experience timeline becomes stacked cards on mobile
- Achievements become swipeable carousel on mobile (optional but recommended)

8) Content Completeness Rule (critical)

You must include **every single resume line**:

- If something doesn't fit a section, create a "More" / "Additional" section.
- Do not drop or rewrite facts.
- You may rewrite sentences for clarity only if meaning is unchanged.

9) Output Format (very important)

Return:

1. The extracted JSON (from resume)
2. A brief sitemap / section list
3. The codebase (folder structure + key files)
4. Clear run instructions

Update ONLY the website background animation. Keep all existing UI, layout, components, colors, text, and section structure unchanged.
Replace the current "neural network working" background with a new futuristic animated background that feels premium and subtle: **soft gradient mesh + drifting particles + occasional faint connecting lines**, low contrast, and not distracting.
Requirements:

- Responsive (mobile/tablet/desktop) and covers full viewport
- Runs smoothly (target 60fps), uses requestAnimationFrame, and caps particle count on mobile
- Respects prefers-reduced-motion (fallback to static gradient)
- Must not block scrolling or clicks (pointer-events: none)

- Implement as a reusable component AnimatedBackground.tsx and swap it in where the old background is mounted
- No new libraries; use Canvas (preferred) or pure CSS if Canvas isn't present Provide only the code changes (files edited + full updated code for those files).
