

Job Notification Automation

Copy paste the same prompt to the chatgpt
please mention you job title in which you're looking for job

Search the web for the latest job postings for the role: [JOB_TITLE].

Primary sources to check:

- LinkedIn Jobs
- Naukri
- Wellfound
- Instahyre

Also check other credible job platforms if useful, such as:

- Indeed
- Hirist
- Cutshort
- Foundit
- company career pages
- YC/startup job boards
- remote job boards

Strict requirements:

1. Only include jobs posted in the last 7 days.
2. Focus on roles that closely match [JOB_TITLE].
3. Prioritize India-based roles, remote roles, and strong startup/product companies unless otherwise specified.
4. Deduplicate the same job appearing across multiple platforms.
5. Exclude expired, unclear, irrelevant, or low-confidence listings.
6. Prefer direct application links or official job pages whenever available.
7. If a platform is inaccessible or has weak results, continue with other reliable sources and mention which sources were successfully checked.

For each job, capture:

- Job title
- Company
- Platform/source
- Location
- Work mode (Remote / Hybrid / Onsite)
- Posted date
- Experience range, if available
- Salary, if available
- Skills/keywords, if available
- Direct application link

Output format:

A) Start with a short summary:

- Total jobs found
- Number of strong matches
- Best platforms today
- Notable companies hiring

B) Then provide a clean table with columns:

| # | Job Title | Company | Platform | Location | Mode | Posted | Link |

C) Then add a section:

“Top 5 best bets today”

For each of the top 5 roles, write:

- Job title + company
- Why it is a strong fit in one line
- Application link

D) Then add:

“Source coverage”

Mention which platforms were checked successfully and which had limited/no usable results.

Ranking logic:

- Best title match first

- Most recent postings first
- Better companies and clearer job descriptions first
- Official/company links preferred over aggregator reposts

Be concise, practical, and do not invent missing details.

or

Act as an expert job search assistant and find the latest job postings for this target role:

Role: [JOB TITLE]

Preferred Location: [India / Remote / Bangalore / Delhi / Any]

Experience Level: [0-2 years / 2-5 years / 5+ years / Any]

Preferred Companies: [Startups / Product companies / MNCs / Any]

Search these platforms first:

- LinkedIn Jobs
- Naukri
- Wellfound
- Instahyre

Also search other reliable job sources where relevant:

- Indeed
- Foundit
- Hirst
- Cutshort
- company career pages
- startup job boards
- remote job boards

Rules:

- Only include jobs posted in the last 7 days

- Only include jobs relevant to the target role
- Prioritize matches based on role relevance, recency, company quality, and direct application availability
- Deduplicate listings across multiple platforms
- Exclude expired, irrelevant, suspicious, or low-detail listings
- Prefer direct company or official apply links
- If a source cannot be accessed, continue with other valid sources and mention the limitation clearly
- Do not hallucinate missing details

For each listing, capture:

- Job title
- Company
- Source/platform
- Location
- Work mode
- Posted date
- Experience required
- Salary, if available
- Skills, if available
- Apply link

Return the result in this format:

1. Quick Summary

- Total jobs found
- Strong matches found
- Best sources today
- Top hiring companies

2. Jobs Table

| # | Job Title | Company | Platform | Location | Mode | Posted Date | Experience | Salary | Apply Link |

3. Top 5 Best Bets

For each:

- Job title + company

- One-line reason it is a strong fit

- Apply link

4. Source Coverage

- Platforms checked successfully

- Platforms with limited access/results

- Notes or limitations
